

We each have our own reasons for investing – buying a property, for example, or funding a comfortable retirement – but some simple motivations lie beneath.

We want our money to grow in value over time, to provide us with an income or a mixture of both. In this quick guide we focus on investing for growth, looking at some of the styles fund managers might follow to help you achieve this goal.

1. Growth investing

Fund managers who favour growth investing as a style will invest in stocks they expect to grow more quickly or to a greater extent than the market overall.

Growth stocks can range from big technology companies like Amazon, Facebook and Alphabet (which owns Google) to smaller, newer companies innovating in areas like climate change or the ageing population. Often, growth stocks don't share their profits with investors by paying dividends, instead reinvesting them to drive further growth.

Be aware

If you choose a fund that favours smaller, newer companies for growth investing, be aware that such companies can carry a greater amount of risk – they have a high failure rate and many have suffered as a result of the pandemic. That said, many are also concentrated in technology and clean energy innovation

and could potentially benefit from initiatives such as the European Green Deal and US President Joe Biden's \$2.25tr (US dollar) infrastructure plan aimed at building back 'better' and 'greener'.

2. Value investing

You can read more about the economic cycle in <u>Investing</u> through the global economic cycle.

3. Momentum investing

4. High conviction investing

This style involves a fund manager investing in stocks which, based on their investment research and analysis, they feel are undervalued by the market and are trading at a lower price than might be expected. The idea is that over time the price may increase to more closely represent their true value.

Value stocks can be established companies with good foundations and future prospects that have fallen out of favour with investors, or niche businesses with potential that has not yet been fully realised or generally understood. One reason for a company or sector falling out of favour can be how it is impacted by the ups and downs of the ongoing economic cycle. You may hear these described as 'cyclical' investments.

Momentum investing is based on the idea that market trends can persist for a period and investors can profit by sticking with that trend for as long as it continues. In short, fund managers that favour this approach focus on finding investments which have performed well recently and which, because of an ongoing trend, they expect will continue doing so.

The decisions made by momentum investors are based on technical analysis and rules they have set for themselves, so it's not the same as simply following the herd.

This style sees a fund manager focus on a relatively small range of investments (say, 20-30) which they believe to be of high quality with a strong competitive position in the market. These investments have been specifically selected by the fund manager as they believe their potential performance and other qualities match their investment convictions.

One source of risk for high-conviction funds is the relatively small number of components, compared to a broad-based multi-asset fund for example. Each has the potential to significantly influence the overall fund performance.

5. Factor investing

This style is all about choosing investments in a systematic way, based on a broad range of attributes (the factors) that have tended to be associated with achieving higher returns over time. Academics have identified over 600^2 that can influence risk and return for investing. These include value and momentum factors, for example.

Style diversification

Investing in funds that follow different styles, or blend a range of styles, can help to diversify your portfolio and smooth your investment journey over the longer-term. For example, growth and value stocks may respond differently to market activity and economic cycles – each has outperformed the other at various points over the years.

It's important however to keep in mind that investments can always go down as well as up and past performance is not a guide to future performance.

Do your research before you invest

It's important to be clear on exactly where you're putting your money and whether funds are consistent with your own objectives, needs and risk tolerance.

The vast majority of funds are required by law to produce a short, accessible document containing key information: objectives and investment policy, investment strategy, risk and reward profile, charges, past performance and some practical information. This will include whether a fund aims to provide growth, income or a mix of the two.

These Key Investor Information Documents (KIIDs), also known as Key Investor Documents (KIDs) for some types of funds, should be easy to find on a fund provider's website. For example, you can find KIIDs for Santander Asset Management funds in our **fund centre** at **santanderassetmanagement.co.uk**.

Don't forget the power of compounding

Compounding plays a key role in investment growth. Choosing a fund that reinvests any interest or dividend payments to add to your capital for generating growth, could make a substantial difference to the total return you accumulate over time. However, compounding may not be appropriate if you are looking to drawdown regular income throughout the period of investment.

The right investment – or mix of investments – for you will always depend on your personal circumstances, timescale and goals. If you're not sure then you may find it helpful to speak with a financial adviser who can help you understand different fund manager styles, the pros and cons of each, and explore your options.

Let's be clear!

Investment terms explained

Cyclical sectors: Industries that are sensitive to or positively affected by the macroeconomic environment.

Diversification: Spreading your money across different investments to help manage risk.

Economic Cycle: Economic cycles are part of the normal ebb and flow of investing. Each cycle usually has four main stages: peak, recession (when the economy is going through a downturn), trough and expansion (when the economy starts to grow again).

Portfolio: A group of investments that are managed together to meet a particular objective.

Shares (often referred to as equities or stocks): In investing, this is a share of ownership in a company. Investing in a fund gives exposure to underlying share prices without investors actually owning the shares themselves

Important Information

This material is for information only and does not constitute an offer or solicitation to buy or sell any securities or other financial instruments, or to provide investment advice or services.

Past performance is not a guide to future performance. The value of investments and any income is not guaranteed and can go down as well as up and may be affected by exchange rate fluctuations. This means that an investor may not get back the amount invested.

Opinions expressed within this document, if any, are current opinions as at 31 July 2021 and do not constitute investment or any other advice; the views are subject to change and do not necessarily reflect the views of Santander Asset Management as a whole or any part thereof.

Santander Asset Management UK Limited (Company Registration No. SC106669) is registered in Scotland at 287 St Vincent Street, Glasgow G2 5NB, United Kingdom. Authorised and regulated by the Financial Conduct Authority (FCA). FCA registered number 122491.
